GENERAL INFORMATION:

APPLICANT: Holdaday, John W.

APPLICANT: Fortier, Anne H.

TITLE OF INVENTION: Compositions and Methods for Inhibiting Endothelial Cell Prolifers

TITLE OF INVENTION: Compositions and Methods for Inhibiting Endothelial Cell Prolifers

TITLE OF INVENTION: Anne H.

TITLE OF INVENTION: and Regulating Amgiogenesis Using Cancer Markers

FILE REFERENCE: 05213-0344 43170-271565

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                          230

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 3, Application US/09759359A
Patent No. 6492153
GENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TITLE OF INVENTION: THEREOF
FILE REFERENCE: CLOO1043
CURRENT APPLICATION NUMBER: US/09/759,359A
CURRENT FILING DATE: 2001-01-16
NUMBER OF SEQ ID NOS: 3
SOFTWARE: FASTSEQ for Windows Version 4.0

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 30,

Preparation of soluble recombinant endostatin involves transforming Streptomycete host with expression vector comprising nucleotide sequence encoding endostatin operably linked to linker and leader peptide

Example 1; Fig 6; 57pp; English

The present sequence encodes human endostatin. The protein is expressed in Streptomyces. Leader sequences of Streptomyces sp. strain C5 SnpA and S. venezuelae alpha amylase proteins are linked to the SnpA and S. venezuelae alpha amylase proteins are linked to the N-terminal of endostatin. This ensures that endostatin protein is produced as a secreted, soluble protein which needs no refolding, is stable in the fermentation broth and is produced in large quantities. The method is used for preparing soluble recombinant human, murine or primate endostatin, which is useful in the treatment of cancer. Inhibition of tumour growth, inhibition of angiogenesis, isolation of receptors for endostatin and for identification of anti-angiogenic compounds in assays. The endostatin protein is produced as a secreted, soluble protein which needs no refolding, is stable in the fermentation for cultivation in large quantities. Streptomycetes are amenable for cultivation in large fermentations allowing for large quantities of soluble endostatin to be produced.

The specification describes multifunctional proteins which comprise combinations of angiostatin, endostatin, interferon, thrombospondin, artiferon-inducible protein and platelet factor 4, and have anti-angiogenic and/or anti-tumor activity. The multifunctional protein may exhibit useful properties such as having similar or greater biological activity when compared to a single factor or by having improved half-life or decreased adverse side effects, or a combination of these properties. The proteins can be used for treating an engagenic-mediated disease, e.g. cancer, diabetic retinopathy, macular degeneration, or arthitis. They can also be used for inhibiting the production of tumor cells (characteristic of lung, breast, ovarian, production of tumor calls (characteristic of lung, breast, ovarian, hepatoma, sarcoma and lymphoma) in a patient and for inhibiting tumor. Growth. The present sequence is used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GlyLeuAlaGlyThrPheArgAlaPheLeuSerSerArgLeuGlnAspLeuTyrSerIle 106

```
The present sequence is a partial coding sequence for human endostatin. A claimed method for the treatment of ocular neovascularisation, especially choroidal neovascularisation, involves increasing the level of endostatin in ocular tissue, especially where the endostatin is encoded by the present sequence, or is its fragment, derivative or variant. The increase is effected by administering a viral vector, especially an adenovirus, adeno-associated virus, a retrovirus or lentivirus vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    comprising an endostatin-encoding nucleic acid. Cells secreting endostatin may be encapsulated and implanted within an individual. The method is used when ocular neovascularisation is caused by histoplasmosis, pathological myopia, angloid streaks, anterior ischaemic optic neuropathy, bacterial endocarditis, Best's disease, bidshor tetinochoroidopathy, choroidal haemangioma, choroidal naevi, choroidal nonperfusion, choroidal osteomas, choroidal rupture, choroideraemia, chronic retinal detachment, coloboma of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 increasing the amount of endostatin in ocular tissues of afflicted individuals to a choroidal neovascularization inhibiting level -

Endostatin is a 20 kD C-terminal fragment of collagen XVIII that inhibits angiogenesis. The endostatin coding sequence may be used in the recombinant viral vector of the invention for obtaining angiostatin activity. The vector comprises a promoter capable of expressing human angiostatin operably linked to a structural gene encoding one or more domains of human angiostatin. The vector, which may be a replication defective viral vector, is useffor inhibiting angiogenesis in a mammal, especially with cancer or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New recombinant viral vector expressing human angiostatin useful for inhibiting angiogenesis in a mammalian subject with cancer or tumor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: This sequence is given incorrectly in the sequence listing of

activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours, tumour metastasis, benign tumours including heamangiomas, acoustic neuromas, neurofibromas, trachomas and pyrogenic granulomas, rheumatorid arthritis, psoriasis, ocular angiogenic diseases e.g. diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibrache neovascularisation, telangiectasia, haemophiliac joints, angiotibroma, wound granulation, and excessive or abnormal stimulation of endothelial cells, intestinal cells, atherosclerosis, sclerodermal and chypertrophic scars, i.e. keloid scars. The DNA constructs may be used in gene therapy. The present sequence is a cDNA encotaing human endostatin used in the construction of immunofusin containing human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       immunoglobulin gamma (1gG) Fc fragment.

Note: This sequence is stated in claim 12 as being amino acid sequence of plasminogen fragment, however, the rest of the specification refers to this sequence as being nucleotide sequence of human endostatin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; Endostatin(TM); angiogenesis mediated disease; solid tumours; blood borne tumour; leukaemia; tumour metastasis; benign tumour; haemagioma; accoustic neuroma; neurofibroma; trachoma; rubeosis; pyogenic granuloma; rheumacoid arthritis; psoriasis; colon cancer; ocular angiogenic disease; diabetic retinopathy; macular degeneration; retinopathy of prematurity; macular corneal graft rejection; neovascular glaucoma; retrolental fibroplasia; Osler-Webber Syndrome; myocardial angiogenesis; plaque neovascularisation; telangiectasia; plaque neovascularisation; telangiectasia; haemophiliac joint; angiofibroma; wound granulation; ds.

The sequence encodes Human Endostatin(TW). The new method of the invention is useful for producing, recovering and purifying Endostatin convention is useful for producing, recovering and purifying Endostatin culture media, and fermentation media. Endostatin(TW) is useful for treating angiogenesis mediated diseases such as solid tumours, blood corner tumours, leukemmias, tumour metastases, benign tumours, blood borne tumours, leukemmias, tumour metastases, benign tumours, e.g. corneal schematic arthritis, psoriasis, coular angiogenic diseases, e.g. diabetic retinopathy, retinopathy of prematurity, macular concern trenopathy, retinopathy of prematurity, macular concern fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, cancer, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, conferent and hypertrophic sexes where a standial adhesions, atherosclerosis, of endothelial cells such as intestinal adhesions, atherosclerosis, conferedment and hypertrophic scars. Higher yields of more purified, and cologically active Endostatin(TW) are obtained by the new method.

Endostatin(TW) can be stored in buffers for extended periods of time, and also subjected to lyophilsation, while preserving biological activity.

Contrifugation of broth from fermentation steps in production is avoided, preventing unwanted potential cellular lysis and contamination with
                                                                                                                                                                                                                                                                       /note= "None of the above CDSs have start or stop codons"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Producing Endostatin protein for treating angiogenesis mediated diseases such as solid tumours, comprises recombinantly producing the protein using an expression system, and recovering and purifying the protein -

sufficiently attenuated for use in human gene therapy. The products of the invention have anti-angiogenic, cytostatic, anti-diabetic and ophthalmological activity. The vector is used in gene therapy for expresses an anti-angiogenic polypeptide. An additional use comprises expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the vicinity of the retina. The vector is administered to cells ex vivo and then administered to the patient.
                                                                                                                                                                                                                                                                            87 GlyLeuAlaGlyThrPheArgAlaPheLeuSerSerArgLeuGlnAspLeuTyrSerIle 106

```

The present sequence encodes an angiogenesis inhibiting factor (I), designated IAF-1. The present invention also describes: (1) preparation of (I) and its derivative; (2) an IAF binding acceptor and its preparation; and (3) an IAF antibody. (I) is useful for preparing new bloological preparations for effectively treating various tumours and abnormal-vessel diseases. The IAF antibody is preferably a polyclonal antibody, mosaic antibody, single stranded antibody and human originated antibody.

Example 1; Fig 5; 41pp; Chinese.

dependent cancers. The polynucleotide and polypeptide sequences of this endostatin are useful for treating and diagnosis of tumours, ocular angiogenic diseases, osler-Webber syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma and wound granulation, for treatment of diseases related to accessive or abnormal stimulation of endothelial cells e.g. intestinal adhesions, atherosclerosis, scleroderma. The protein may also be useful as a birth control agent by reducing or preventing uterine vascularisation. The gene for endostatin may be isolated from cells or tissue that express high levels of endostatin, eg. tumour cells, by generating cDNA from mRNA using reverse transcriptase and then amplifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel viral gene therapy vector comprising a nucleic acid molecule encoding an anti-angiogenic polypeptide chosen from human or murine angiostatin, human or murine endostatin and angiogenesis-inhibiting fusions and fragments, where the viral vector is

Recombinant mouse endostatin (20 mg/kg) was administered subcutaneously to mice implanted with Lewis lung carcinomas. There was tumour mass regression non-detectable levels after 12 days of therapy due to the angiogenesis inhibitory activity of endostatin. Thus the protein is useful for treatment of angiogenesis-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              el endostatin capable of inhibiting endothelial cell proliferation angiogenesis, useful for treating angiogenesis-dependent cancers as birth control agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; endothelial cell proliferation inhibitor; collagen XVIII; anaigidenesis inhibitor; anti-tumnur; cytostatic; antiporriatic; vasotropic; determetological; ophthalmological; vulnerary; antiarteriosclerotic; antidiabetic; haemostatic; contraceptive; ocular anglogenic disease; atherosclerosis; soleroderma; mycoardial anglogenesis; telangiectasia; angiofibroma; wound granulation, ds.

myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma and wound granulation, for treatment of diseases related to excessive or abnormal stimulation of endothelial ęg protein. When the human endostatin gene sequence AAA27004 is recombinantly expressed, an observable doublet of protein results, both versions of which are functional endostatin proteins. The present gene sequence encodes an endostatin variant which is the same as the protein encoded by AAA27004 minus the first four amino acids. Recombinant mouse endostatin (20 mg/Kg) was administered subcutaneously to mice implanted with Lewis lung carcinomas. There was tumour mass regression non-detectable levels after 12 days of therapy due to the angiogenesis inhibitory activity of endostatin. Thus the protein is useful for treatment of angiogenesis - dependent cancers. The polymucleotide and polypeptide sequences of this endostatin are useful for treating and diagnosis of tumours, ocular angiogenic diseases, Osler-Webber syndrome, our cells, by generating cDNA from mRNA using reverse transcriptase then amplifying the DNA sequence. cells e.g. intestinal adhesions, atherosclerosis, scleroderma. The protein may also be useful as a birth control agent by reducing or preventing uterine vascularisation. The gene for endostatin may be isolated from cells or tissue that express high levels of endostatin,

Producing Endostatin protein for treating angiogenesis mediated diseases such as solid tumours, comprises recombinantly producing the protein using an expression system, and recovering and purifying the protein

Claim 6; Page 32; 67pp; English.

The sequence encouses numbaria bindostatining witerential acking the Niteranial 4 amino acids. The new method of the invention is useful for producing, recovering and purifying Endostatin (TW) from biological sources, such as biological fluids, tissues, cells, culture media, and fermentation media. Endostatin(TW) is useful for treating angiogenesis mediated diseases such as solid tumours, blood control tumours, leukaemias, tumour metastases, benign tumours, e.g. treating angiogenesis mediated diseases such as solid tumours, blood control to the nemangioma, acoustic neuromas, neurofibromas, trachomas, and pyogenic granulomas, rheumatoid arthritis, psoriasis, ocular angiogenic diseases, c.g. diabetic retinopathy, retinopathy of prematurity, macular correct retrolental fibroplasia, rubeosis, osler-Webber Syndrome, cancer, retrolental for treating disease of excessive or abnormal stimulation cancer and hypertrophic scars. Higher yields of more purified, and biologically active Endostatin(TW) are obtained by the new method.

Collegically active Endostatin(TW) are obtained by the new method.

Collegically active Endostatin(TW) are obtained by the new method.

Collecting subjected to lyophilisation, while preserving biological activity.

Contribugation of broth from fermentation steps in production is avoided, particles and contaminal and contaminal production is avoided. additional proteins, pigments, enzymes and other cellular chemicals and The sequence encodes Human Endostatin(TM) N-terminal deletion debris.

                                                                                                                                                                                                                                                                                                                                        ō
                                                                                                                                                                                                                                           The present invention provides endostatin peptides which can be used in the modulation of angiogenesis. This is useful in the treatment of cancers, inflammation, rheumatoid arthritis, chronic articular rheumatism, psoriasis, disorders associated with inopportune invasion of vessels such as diabetic retinopathy, neovascular glaucoma, retinopathy of premarturity, macular degeneration, corneal graft rejection, retrolental fibroplasia, rubeosis, capillary proliferation in atherosclerotic plaques and osteoporosis. Other angiogenesis-dependent diseases include Osler Webber syndrome, myocardial angiogenesis, plaque neovasculisation, telangiectasia, haemophiliac joints and wound granulation. In addition, the peptides can be used as birth control
                                                                                 Endostatin peptide comprising at least four endostatin amino acid residues are e.g. angiogenesis inhibitors for treating cancer and diabetic retinopathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; endothelial cell proliferation inhibitor; collagen XVIII; anglogenesis inhibitor; anti-tumour; cytostatic; antipscriatic; vasotropic; determatological; ophthalmological; vulnerary; antiarteriosclerotic; antidiabetic; haemostatic; contraceptive; coular anglogenic disease; atherosclerosis; soleroderma; myocardial anglogenesis; telangiectasia; anglofibroma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        555

The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia,
                                                                                                                               angiogenesis-related disorder, such as cancers or diabetic retinopathy,
                                                                                                                                                                                                                                                                                                                                                   rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, coronary collaterals, cerebral collaterals, arteriovenous malformations, ischemic limb angiogenesis, diabetic neovascularisation, and fractures. The present sequence is the canine
                                                                                                           isolated nucleic acid molecule for the treatment of
                                                                                                                                                      encodes an endostatin protein
                                                                                                                                                                                               Claim 2; Fig 4; 56pp; English

Novel fusion protein of angiostatin or endostatin and an immunoglobulin FC region, useful for treating conditions mediated by angiogenesis, such as rheumatoid arthritis, tumors and macular degeneration -

P-PSDB; AAY70265

Example 8; Pages 58-59; 68pp; English.

a signal sequence, an immunoglobulin Fc region, and an anglogenesis inhibitor selected from angiostatin, endostatin, a plasminogen fragment having angiostatin activity, a collagen XVII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours, tumour metastasis, benign tumours including haemangiomas, acoustic neuromas, neurofibromas, trachomas and pyrogenic carantomas, returnopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental confibroma, wound granulation, telangiectasia, haemophiliac joints, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, and excessive or abnormal stimulation of hypertrophic scars, i.e. keloid scars. The DNA constructs may be used in gene therapy. The present sequence is a DNA encoding canine endostatin used in the construction of immunofusin containing canine The patent discloses a DNA molecule encoding a fusion protein comprising immunoglobulin Fc fragment.

                                                                                                                                                                                                                                                                                                                                                      The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiactasia, haemophiliac joints, angiofibroma, wound granulation, coronary collaterals, cerebral collaterals, netreinovenous malformations, ischaemic limb angiogenesis, diabetic neovascularisation, and fractures. The present sequence is the canine pro-endostatin coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CCCGGGGCCCCCCACACGCTCCTACGTGCACTTCCAGCCCGCTCGCCCCACTGGTGGG 120

10:

Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.
